

Our client is one of the world's largest pharmaceutical companies and known for its continuous investment in product development and state-of-the-art technologies. The provision of global and integrated IT solutions is key to supporting the business. For the management and implementation of IT-projects at the company's headquarters in Basel we are seeking several new team members as

## IT-Project Managers

### Responsibilities:

manage and lead international technical project teams with responsibility for achieving project plans, and ensuring quality standards and budgets; consult and support internal customers in all aspects of information technology; design and implementation of IT solutions with regard to customer needs and technical standards.

### Requirements:

degree in business, computer or natural sciences and 3-5 years of experience in application development in medium to large projects; excellent communication and technical skills and proven project management experience in an international environment.

## Service Manager

### Responsibilities:

manage external service provider relationships and contracts; define and transform business requirements into consistent IT services and processes; define clear service levels and measurement criteria for service delivery; monitor services regarding quality, performance, costs and reliability; active membership in crossfunctional projects.

### Requirements:

sound experience in negotiating and managing service level agreements; excellent knowledge of NT/Microsoft system architecture; experience with Windows terminal server solutions (e.g. CITRIX); good communication and technical skills; proven project management experience.

## IT-Business Analysts Application Managers

### Responsibilities:

analysis and re-engineering of business processes; translate process descriptions into system requirements; application management in client/server and web environments; implementation of electronic data capture and data warehouse solutions; project work in eClinical environment with multinational teams.

### Requirements:

several years experience in application development gained in a research driven environment, preferably a health care company; knowledge of development methodologies; good communication skills and excellent technical understanding.

## System Engineers eBusiness

### Responsibilities:

WEB application development (client and browser based applications); Portal Technologies; management and maintenance of applications (performance monitoring, troubleshooting); definition of common object classes; communication with internal users at an international level.

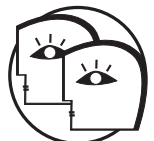

### Requirements:

qualified degree in science or information technology; ideally several years of experience in system design and application development; good knowledge of JAVA, JBuilder, HTML, JavaScript, ASP; good communication and planning skills.

All positions require fluency in English and ideally German, strong interpersonal skills, cultural awareness, and the ability to work in highly demanding teams. If you are interested in developing your personal and professional skills, we offer you a challenging and international work environment with possibilities for further career development.

To apply, please send a full resume in German or English to our recruiting partner
